Python Test

Title: Make a basic Python CLI application to track employee information.

Description: You have joined the company "ABC" as a Python Developer. Now, your manager assigned you to make a simple CLI application to track employee information. He wants the following features-

1. Simple CLI interface
2. Option to add a new employee
3. Option to UPDATE an employee information
4. Option to delete an employee record
5. Option to View all employees
6. Option to search for an employee using their name or designation
7. Ability to save the employee information in a .txt file

Note: You have to make sure all the added information is saved in a .txt file as well your program should be able to read the .txt file.

Deliverable:
1. Git repository link with your code
2. A simple documentation of your solution approach
3. Screenshots of your output.

Optional:
1. Use the OOP concept, make use of Python Classes
2. Handle Invalid User Input
